Retention Recommendations: Where HR Should Act First

Department	JobRole	Attrition Rate	Total Employees	Risk Flag
Sales	Sales Representative	39.76%	83	High Risk
Research & Development	Laboratory Technician	23.94%	259	Medium Risk
Human Resources	Human Resources	23.08%	52	Medium Risk
Sales	Sales Executive	17.48%	326	Medium Risk
Research & Development	Research Scientist	16.10%	292	Medium Risk
Research & Development	Manufacturing Director	6.90%	145	Low Risk
Research & Development	Healthcare Representative	6.87%	131	Low Risk
Research & Development	Manager	5.56%	54	Low Risk
Sales	Manager	5.41%	37	Low Risk
Research & Development	Research Director	2.50%	80	Low Risk
Human Resources	Manager		11	Low Risk
Total		16.12%	1470	Medium Risk

Key Findings & Recommendations

1. Employees working overtime show nearly 3x higher attrition (30.5%) than those who don't (10.4%) — the single strongest predictor in this dataset. Recommend auditing workload distribution and overtime policy, especially in Sales.
2. New hires are the highest flight risk: 34.9% attrition in the first 2 years, dropping to 8.1% after 10+ years. Recommend strengthening onboarding, early mentorship, and 90-day check-ins.
3. Sales Representatives have the highest attrition of any role (39.8%), well above the company average of 16.1%. Recommend a targeted retention review — compensation benchmarking and workload analysis specifically for this role.
4. Distance from home shows no consistent relationship with attrition — commute length does not appear to be a meaningful driver, so remote/hybrid policy changes are unlikely to move the needle here.
5. Job satisfaction shows a clear inverse relationship with attrition (22.8% at lowest satisfaction vs 11.3% at highest) — recommend pulse surveys and manager training focused on early satisfaction signals.
